TECHNICAL DATA SHEET

Description

Texwipe's CleanStep™ mats and supporting frames are specifically designed to capture particulates from feet and wheel-borne traffic prior to entry into cleanrooms or controlled environments.

CleanStep™ adhesive mats can be used with or without frames to provide an effective means of reducing contamination in high traffic areas. Constructed with 30 or 60 layers, each removable sheet has a consistent adhesive coating designed to trap particles and prevent transfer. Easy to install and maintain, the CleanStep™ Mats come in 3 sizes, 3 colors, and 2-layer configurations to address end-user needs.

CleanStep™ Frames are made of polystyrene and provide an excellent surface for adhering CleanStep™ mats. When cleaning protocols require portability or when a floor surface is not conducive to adhering mats, this non-slip, light-weight design provides the answer.

Features & Benefits

- Mats and frames are easy to install, use and maintain
- Consistent adhesive coating on each mat layer effectively retains the contamination
- Each layer is numbered for easy record keeping
- Available in 5 sizes, 3 colors and 30- or 60-layer configurations for flexibility to different door or entry point sizes
- The lightweight, durable frames are made of polystyrene and have a non-skid backing
- Frames provide an excellent surface for holding the mat when cleaning protocols require portability or when a floor surface is not conducive to securing the mat

Applications

- Cleanrooms and critical environment entry points
- Gowning rooms
- Ante rooms
- Cleanroom construction projects for minimizing and capturing dust and debris
