## HG5 Nitrile Cleanroom Gloves

### ADDED PROTECTION FROM THE RISK OF CHEMICAL EXPOSURE

It's critical to protect staff from exposure to potentially hazardous chemicals and chemotherapy drugs. In addition to providing a barrier to chemical splash, microorganisms and viruses, **PUREZERO\* HG5 Cleanroom Gloves are now tested against 2 chemotherapy drugs and 21 chemicals.**

### CHEMOTHERAPY DRUG RESISTANCE GUIDE<sup>4</sup>

Chemotherapy Agent (Concentration in mg/ml)	PUREZERO* HG5 White Nitrile Gloves 12"		PUREZERO* HG5 Blue SGX* Nitrile Gloves 12"	
	Minimum Breakthrough Time (minutes)	Permeation Rate ( $\mu\text{g}/\text{cm}^2/\text{min}$ )	Minimum Breakthrough Time (minutes)	Permeation Rate ( $\mu\text{g}/\text{cm}^2/\text{min}$ )
Carmustine (BCNU) (3.3)	67.3	0.29	68.7	0.12
Thiotepa (1.0)	>240	N/A	>240	N/A

Use the rating system below to determine the chemotherapy compatibility for exposure:

<10	Not recommended for use - breakthrough can occur in less than 10 minutes.
11 - 239	Use with caution - breakthrough can occur between 11 and 239 minutes.
>240	Recommended for protection - no breakthrough up to 240 minutes.
N/A	The chemotherapy drug did not reach the minimum permeation rate (0.01 $\mu\text{g}/\text{cm}^2/\text{min}$ ) as defined within ASTM D6978.

**CAUTION:** It's the user's responsibility to determine the applicability of these gloves for their intended use with chemotherapy drugs.

\*Tested per ASTM D6978, Standard Practice Assessment of Resistance of Medical Gloves to Permeation by Chemotherapy Drugs. The testing conditions used are intended to approximate the worst case conditions for use. Testing was conducted on a single layer glove material.

### DEFINITION OF TERMS

**Breakthrough time:** The time required for the test chemical to be detected on the inside of the glove. Essentially, this is the amount of time that the glove can resist a chemical when the glove is fully immersed in the chemical.

**Permeation:** The process where chemicals, such as liquids, gases and vapors can pass through a glove film (or other PPE interfaces) without penetrating directly through a pinhole, tear or other visible opening.

**Permeation rate:** The flowrate of the chemical after the chemical breaks through the inside of the glove. It is measured in amount per surface area of the glove per time ( $\mu\text{g}/\text{cm}^2/\text{min}$ ).

Based on the ANSI/ESD STM15.1:2019 test results from an external laboratory at conditions of 12% RH and 23°C, all **HALYARD\* **PUREZERO\*** Nitrile Glove** product families listed above are within the dissipative classification range (Resistance =  $10^4$  to  $10^{11}$  ohms) as defined by ANSI/ESD standards.

Therefore, **HALYARD\* **PUREZERO\*** Nitrile Gloves** are considered to be static dissipative in-use. Please note that this is based on a standardized test method in a laboratory environment, and the resistance test results and classification do not fully characterize the glove for all electrostatic properties. Other electrostatic properties, such as charge accumulation, and specific process conditions may need to be assessed based on your particular application prior to use.
