Description

HALYARD* **PUREZERO*** HG3 Light Blue Nitrile Cleanroom Gloves are designed for semiconductor, pharmaceutical and medical device manufacturing applications. These gloves are clean processed (washed repeatedly in deionized water) to ensure consistent control of low particles and extractables and are recommended for use in ISO Class 3 or higher and Grade A/B/C/D cleanrooms. Because HALYARD* **PUREZERO*** Light Blue Nitrile Gloves have an **accelerator-free**¹ formulation, there is a reduced risk of allergies and skin irritation associated with accelerator chemicals in other nitrile gloves.

Manufactured at OUR OWN
Safeskin Facility in Thailand.

June 24, 2021

Dear Customer,

O&M Halyard supplies the following items that meet the definition of an *article* under both OSHA and WHMIS. A Safety Data Sheet (SDS), therefore, is not required for them.

HALYARD* PUREZERO* SMOOTH HG3 WHITE NITRILE GLOVES

HALYARD* PUREZERO* HG3 WHITE NITRILE GLOVES

HALYARD* PUREZERO* HG3 LIGHT BLUE NITRILE GLOVES

HALYARD* PUREZERO* HG3 LIGHT BLUE STERILE NITRILE GLOVES

HALYARD* PUREZERO* HG3 WHITE STERILE NITRILE GLOVES

Under the Occupational Safety and Health Administration (OSHA) 1910.1200, the Hazard Communication Standard Safety Data Sheets (SDS) are required for all hazardous chemicals with certain exceptions. One exception is for manufactured articles. An *article*, as defined in section (c), is "a manufactured item: (i) which is formed to a specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which, under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a hazardous chemical (as determined under paragraph (d) of this section), and does not pose a physical or health risk to employees."

The Canadian WHMIS Regulation contains a similar exclusion for manufactured articles. While the EU Regulations do not specifically contain an exemption for manufactured articles, it is our opinion that those products sold by O&M Halyard that are considered articles in the U.S. and Canada would not be considered dangerous substances or preparations in the EU and would not require a Safety Data Sheet.

Since certain O&M Halyard products may be used to absorb bodily fluids or other potentially hazardous materials that may require special disposal, the user must determine the local, state, and federal regulations that apply to the disposal of the used products and ensure proper disposal.

Please feel free to contact us if you require any further information

11 - 239	Use with caution - breakthrough can occur between 11 and 239 minutes.
>240	Recommended for protection - no breakthrough up to 240 minutes.
N/A	The chemotherapy drug did not reach the minimum permeation rate (0.01 µg/cm²/min) as defined within ASTM D6978.

CAUTION: It's the user's responsibility to determine the applicability of these gloves for their intended use with chemotherapy drugs.

DEFINITION OF TERMS

Breakthrough time: The time required for the test chemical to be detected on the inside of the glove. Essentially, this is the amount of time that the glove can resist a chemical when the glove is fully immersed in the chemical.

Permeation: The process where chemicals, such as liquids, gases and vapors can pass through a glove film (or other PPE interfaces) without penetrating directly through a pinhole, tear or other visible opening.

Permeation rate: The flowrate of the chemical after the chemical breaks through the inside of the glove. It is measured in amount per surface area of the glove per time (µg/cm²/min).

Based on the ANSI/ESD STM15.1:2019 test results from an external laboratory at conditions of 12% RH and 23°C, all **HALYARD* **PUREZERO*** Nitrile Glove** product families listed above are within the dissipative classification range (Resistance = 10^4 to 10^{11} ohms) as defined by ANSI/ESD standards.

Therefore, **HALYARD* **PUREZERO*** Nitrile Gloves** are considered to be static dissipative in-use. Please note that this is based on a standardized test method in a laboratory environment, and the resistance test results and classification do not fully characterize the glove for all electrostatic properties. Other electrostatic properties, such as charge accumulation, and specific process conditions may need to be assessed based on your particular application prior to use.
